Black Swamp Bird Observatory Field Checklist of Birds

Western Lake Erie Marsh Region

DATE _____ TIME _____

LOCATION _____

WEATHER _____

OBSERVERS _____

This region of northwestern Ohio and southeastern Michigan is famous for concentrations of birds, especially during migration. This checklist includes birds occurring regularly in this region, with a brief note of their status. Names and sequence here follow those of the American Ornithologists' Union and are current as of **September 2013**.

Seasonal Status:

- S — summer resident
- W — winter resident
- M — migrant
- P — present at all seasons (may include migratory populations moving through)

Abundance codes:

- no designation — Occurs regularly, should be found daily in prime habitat and season.
- u — uncommon. Regular, but not expected every day even in prime habitat and season.
- r — rare. Occurs in very small numbers, and might not be found every year.
- x — very rare. Found in this area and season only a few times per decade.
- loc — local. Found regularly in only a very small part of this area.
- irr — irregular. Numbers variable from year to year, might be common or nearly absent.
- Extremely rare visitors, which might not occur even once per decade, are not listed here.
